This infographic is part of the set of country profiles on ageing across the Arab region. Drawing on the latest openly available data from 2015 - 2020, it highlights the situation of older women and men in relation to income, health, education, autonomy and safety, and how national systems and national strategies on ageing address their needs and their rights in these areas. These country profiles aim to help examine the progress towards older persons’ inclusion in the Sustainable Development Goals, as well as to identify opportunities to strengthen national strategies and data.

**GENERAL CONTEXT**

**Number and proportion of older and younger persons, 2020 - 2050**

Lebanon is going through a demographic shift as the number of persons aged 60+ is expected to more than double between 2020 - 2050 from about 765,000 (11.2 % of the total population) to 1.7 million (27.1%).

Over the same period, the number of persons aged 15 - 24 will decrease by about a third.

Additionally, the country hosts nearly 1.5 million refugees of which 4.4% are persons aged 65+.

---

1 For statistical purposes, ‘older person’ is defined as an individual aged 60 and over.

2 The profiles were prepared by HelpAge International. The profiles do not reflect the views of UNFPA and any errors are attributed to the researchers.

3 Proportion of older women (men) is defined as the percentage of women (men) aged 60 and over of the women (men) of all ages. Throughout the profile some of the indicators are expressed as ‘proportion of older persons/women/men’. Such indicators should be interpreted as a percentage of persons/women/men aged 60 and over of the respected population group, unless expressed otherwise. For example, ‘9.3% of older men have a disability’ means that of all men aged 60 and over 9.3 per cent have a disability.
Disability rates increase with age as 16 - 21% of persons aged 65+ have a disability compared with 2.6% of the population aged 15 - 64. Across the ethnic backgrounds, older women (19.4% Lebanese and 21% Non-Lebanese) are more likely to have functional difficulties than older men (16% Lebanese and 17% Non-Lebanese).

To ensure every person is able to lead an independent and dignified life at any age, and their communities benefit from the demographic dividend, national policies and systems across all sectors must address the wellbeing and rights of individuals across the life course. To assess the policy response, the profile examines the National Strategy for Older Persons in Lebanon 2020 – 2030 by the Ministry of Social Affairs, UNFPA, ESCWA and CSA.

4 The demographic dividend is the economic growth resulting from the number of persons in employment exceeding the number of persons outside of the labour market. Demographic dividend, https://arabstates.unfpa.org/en/topics/demographic-dividend-6

5 Life course approach to policy recognises that individuals' roles, abilities, and needs are shaped by positive and negative experiences, and as we age these experiences accumulate. To mitigate immediate and long-term impacts of disadvantages, policies must consider how intersecting identities and varying forms of discrimination experienced across the life course can lead to individual 'being left behind. Life course approach to ageing, https://www.helpage.org/what-we-do/life-course-approach-to-ageing/
THE RIGHT TO SOCIAL PROTECTION, SOCIAL SECURITY, AND WORK

Within the Lebanese population 15.4% of older women and 13% of older men live on less than half of the average national income. The poverty rate among Non-Lebanese older women and men is significantly higher, 33.7% and 35.8% respectively. It is estimated that only 9.8% of older persons received a pension in 2020. Older persons continue to work past the age of 60, as 63.5% of men and 15.8% of women aged 60-64, and 25.1% of men and 4.1% of women aged 65+ are in employment. The National Strategy addresses older persons’ rights to social protection and a pension, and sets a strategic objective for the Government to establish comprehensive and fair social protection coverage so older persons can lead independent and dignified lives on an equal basis with others.
Pension systems provide income security for all older persons

National strategy on ageing addresses

- Social protection and social security systems which provide universal coverage  
  YES

- Social protection and social security measures that are of a high enough value, quantity and quality, and for the full period of life  
  YES

- Freedom from discrimination on the basis of age and other grounds in all matters related to employment  
  Partial (focus on removing barriers that preclude individuals from continuing to work as they age)

- Right to work when receiving a pension  
  Partial (focus on flexible retirement schemes)
23.5% of older persons feel they have control over their lives. 25.5% of older women and men report limited control over their own decisions about their finances, health, family life and other aspects of their lives, and nearly 4% feel they have no control. This data should be considered with caution due to the small sample size. While the National Strategy recognises the autonomy of older people as one of its guiding principles, it does not explicitly mention their right to autonomy over all aspects of their lives or the legal capacity to make decisions.

How much freedom of choice and control do older persons feel they have over their life?

How national systems and policies address the needs and the rights of older persons

National strategy on ageing addresses:

- Older persons’ autonomy and independence over all aspects of their lives
  Partial (does not mention all aspects of lives)
- Enjoyment of legal capacity to make decisions, to determine life plans and to lead autonomous and independent lives
  NO
THE RIGHT TO FREEDOM FROM VIOLENCE, ABUSE AND NEGLECT

Older persons are most likely to experience violence, abuse and neglect in public settings (8.6%) than at home (1.2%). The National Strategy recognises all these forms of violence against older persons, as well as the need for data and research to inform, support, monitor and raise awareness in relation to this and other priorities on ageing. Specifically, the National Strategy calls for the development of a road map for research and data on ageing, the establishment of a national observatory on ageing issues, and the allocation of dedicated funding for this work.

How many older persons have experienced violence, abuse or neglect?

older persons aged 65+, both sexes (%)

- Neglect, public setting: 9.1
- Abuse, public setting: 8.6
- Violence, public setting: 6.1
- Neglect, private setting: 1.8
- Abuse, private setting: 1.2

How national systems and policies address the needs and rights of older persons

National strategy on ageing addresses:

- All forms of violence, abuse and neglect in public and private settings: YES
- Regular collection, analysis, utilisation and public dissemination of disaggregated information and statistics on all forms of violence, abuse and neglect: YES
Non-communicable diseases account for more than 88% of years lived with disabilities among older persons. Diabetes and kidney diseases, and sense organ diseases are leading causes of disability for both older women and men. National data on the prevalence of diabetes and high blood pressure among older persons is collected and published, however, it was not possible to include it here as it is reported for a single age cohort 49 - 69.

The National Strategy recognises a continuum of good quality physical, mental and cognitive health services, including provisions for integrated health and social care or palliative care. However, it is estimated that 64% of older women and 69% of older men are protected by health insurance.
How many older women and men have diabetes?

How many older women and men have hypertension?

How national systems and policies address the needs and rights of older persons

**Health protection covers all older persons**

Proportion of older persons covered by any type of health insurance.

- Older women aged 65+ (%): 64
- Older men aged 65+ (%): 69.2

**National strategy on ageing addresses:**

- Continuum of quality and appropriate physical, mental and cognitive health services available and accessible to older persons and which deliver primary, secondary and tertiary health care integrated with care and support, wherever they may reside **YES**

- Holistic palliative care, including access to essential drugs and controlled medicines **YES**

---

8 Data is available but is published for non-standard age cohort 49 - 69
THE RIGHT TO EDUCATION AND LIFELONG LEARNING

Gender, age and ethnic inequality is observed in educational outcomes. Persons aged 85+ are more likely to be illiterate than individuals aged 60 - 64. Nearly 53% of Lebanese women aged 85+ and 80% of Non-Lebanese women aged 85+ are illiterate compared with 30% of Lebanese and 27% of Non-Lebanese men of the same age. The National Strategy recognises the right of older person to lifelong learning and different forms of education and skill building. However it offers limited considerations for their affordability and accessibility.

How many older persons have an education?

Illiteracy rate by age group, nationality and sex

How national systems and policies address the needs and rights of older persons

National strategy on ageing addresses:

- All forms of lifelong learning, education and skill building: **YES**
- Learning opportunities adapted to the specific needs of older persons: **NO**
- Lifelong learning, education and skills-building opportunities that are affordable and financially accessible: **NO**
The review of statistics published during 2015 - 2021 by the Lebanon Central Administration of Statistics (CAS), Ministry of Health, Ministry of Social Affairs as well as UN agencies shows that data on older women and men is collected across a variety of socio-economic indicators with very few gaps. A number of barriers to better data on ageing limit our understanding of the diverse needs of older women and men, and hinders our ability to monitor progress on their rights and the National Strategy.

Firstly, while the data on older persons is collected and published, its presentation is inconsistent. For example, statistics on illiteracy is disaggregated by five age cohorts, e.g. 60 - 64, 65 - 69 etc. with an upper age band 85+, across gender and ethnicity. In comparison, health insurance coverage is disaggregated by gender for a single cohort 65+. Data on hypertension and the summary report for the 2017 Demographic and Social Survey present the relevant data at an aggregate level for the total population without a more granular break down across age, sex, and disability.

Secondly, data gaps exist on the wellbeing of older persons with disabilities as well as hypertension and diabetes of older persons, because the survey on non-communicable diseases excluded older women and men age 70 and over.

Concerted efforts are required to close data gaps and provide consistent analysis and reporting of data by age, sex, and disability to build more in-depth and comprehensive evidence on ageing and the situation of older persons in Lebanon.
NOTES

viii World Values Survey wave 7, 2018. Question 48. Percentage of respondents who rated their freedom of choice and control over their life on the scale 1 - 10, where 1 means “none at all” and 10 means “a great deal”. Authors grouped scores into the following categories: ‘Not at all’ – 1; ‘Limited’ – 2, 3, 4; ‘Moderate’ – 5, 6, 7; ‘High’ – 8, 9, 10. Number of persons aged 65+ surveyed: 102. https://bit.ly/3sjtdt1 Accessed 14 December 2021

Author calculations based on the Central Administration of Statistics, Labour Force and Household Living Conditions Survey 2018 - 2019, Table ED.20A: Distribution of all residents (aged 3 years and above) according to attained educational level and age group, Lebanon, 2018.
